As an Architect, you know that what your designs depends largely on the tools you have. And having access to exceptional CAD tools with BIM functionalities will give your designs the boost it deserves. Hence, we will explore ArchiCAD offer right here. What is ARCHICAD? It is a BIM software created for Architects to use on both the Macintosh and Windows. Its developer is Graphisoft a Hungarian company. In addition, Architects use the tool for creating the design of buildings from the idea stage to completion. Apart from Architects, engineering and construction industries also use the software. Furthermore, the difference between AutoCAD and ArchiCAD is that AutoCAD is for drafting, 3D modelling, and rendering and the user creates drawing from 2D-line. But in ArchiCAD, you have a huge increase in productivity and a better-coordinated design. Also, you have a computer model adapted from how you build houses. ArchiCAD has a full version, trial, and educational version. And, the trial version, offers full functional BIM design tools you would love to have as an Architect. Moreover, you have interactive videos to guide you during the trial period so that you can learn without any stress. Therefore, without further delay, let us show you how to get the ArchiCAD free trial now. System Requirements: The system requirements for the ArchiCAD free trial are as follows: Recommended Operating Systems: Windows 10 and Windows 8.1 while for the macOS 10.12 Sierra and Mac OS X 10.11 El Capitan. The graphics and design program helps architects and designers to make information modeling. It is very flexible and adaptive for handling various kinds of design projects. Multilevel Design Tools ArchiCAD is a professional grade computer-aided program to accommodate everything needed by architects. It can be used by students, teachers, entrepreneurs, professionals and institutions in the field of architecture and design. The building information modeling program provides faster modeling process via raw performance optimization, more streamlined workflows and reduction of file sizes. It can develop construction details and estimate the number of materials needed. Expert designers can make complex models, at the same time make the documentation to meet any graphical and representation standards. Any kind of structures can be displayed in projected and symbolic views as well as cover fills. The program features Opening Tool that interprets any kind of voids, recesses, and niches into graphical openings across the virtual model. This is important when it comes to sending documentation and reports to the project coordinator, engineers, and consultants. They can model, schedule, document and share the Openings for inspections. This program is available for collaboration among project members. It allows constant checking of code and constructability during the project. Any kind of changes are detected and users are notified for faster round-trip collaboration. Users can capture and manage whatever their clients requested for developing design alternatives. The program has dRofus database and Grasshopper Deconstruct Component for handling shared data into readable planning rules and design references. The other integrated productivity features are a better user interface, R20 CineRender engine, convenient attribute management, extensive view settings, more options for Text Label Pointer Lines, tweaked Curtain Wall, and seamless integration of the Software Key Activation and Deactivation. Additional Training Package ArchiCAD comes with an extensive packaged called MyARCHICAD. It offers architecture designing tools both for learning and teaching building information modeling through the "implementation" approach by Graphisoft. MyARCHICAD features the creation of a centralized "virtual" Building Information Modeling. It allows retrieval of information as well as generating associative documentation based on the virtual model. Users can access ArchiCAD, its add-ons and some training materials. They will receive the latest designing methods, as well as try some of the free trial add-ons for enhanced workflow. MyARCHICAD comes with 4 license options for students, teachers, entrepreneurs, professionals, and institutions. They can begin with a 30-day trial to test ArchiCAD before applying for full-year extensions. An Alternate CAD Choice ArchiCAD is an ideal CAD program for those who want to try something else other than AutoCAD. It lets them focus more on designing, managing design changes, evaluate any design alternatives and collaborate with fellow project members. Easier modeling workflow Opening tool Supports collaboration tools Competes against more universal CAD programs Not beginner friendly May require large system resources License selection Trial registration Download and Activate You can use the free trial license to explore the full potential of ArchiCAD. Trial Licenses are available with different functionalities for Professionals and for Students, Teachers, and Academic institutions. What would you like to use ArchiCAD for? Professional use Educational use Anyone can apply with a GRAPHISOFT ID Available only for Students and Teachers with a valid student or teacher ID Valid for 30 days Valid for 1 year, and can be extended till the end of your studies free of charge. Full modeling capabilities Full modeling capabilities Files written by the professional trial version are encrypted and can only be opened on the computer where they were created. Educational project files can be opened with any version of ArchiCAD on any computer, but have an irremovable "Educational" watermark. The files can be converted to commercial project files by purchasing a commercial license and opening with the protection key on the computer they were written. Educational project files can be opened with a commercial version of ArchiCAD, in which case ArchiCAD switches to Educational mode and the watermark will be present. Teamwork functionality is available but limited, as files can only be opened on the same computer where they were saved. Teamwork (BIMcloud Basic) functionality is available for all the projects shared in educational mode. I will be using ArchiCAD as a
