If someone has thought that the short story as a form had been relegated to the pages of female magazines (no lack of respect) - think again. A genre that has always been a supporter of Stalwart and the short shape encourager is sci-fi. So when you take a collection of science fiction shorts, you know that you will have as many profoundness and philosophy that cause thought as any similar novel. Add to which the intrigue to see how the concepts approach from someone from China that A ¢ â, ¬ "to be polite A ¢ â, ¬ "to be polite A c a, ¬ "to be poli of having produced SF never translated work to win the Hugoà ϕ \hat{a} , \neg | This was good! I'm sure the cynicals are already waiting for me to counter that last sentence, with a 'ma'Ã ϕ \hat{a} , \neg | Character to disappoint. There is no "but". This is a seriously good writing and highly fun reading. A revision of the Guardian mentioned on the cover describes it as SF in the great style - and if I have a warning that would have been. This is very "great style" science fiction, which is to say that it is entirely focused on science fiction, which is to say that it is entirely focused on science fiction, which is to say that it is entirely focused on science fiction, which is to say that it is entirely focused on science fiction, pushing it to where it could go. Heavy on philosophy (although not dense) and for my mind unfortunately light on the real personal drama. The stories are largely concentrate the IFA thing | With only marginal consideration as the 'then what would have played very personal. Reading the stories I had America from the 1950s. Then, American SF was really reacting to the perceived in a world that is sacked. Of all literary genres, I always thought that SF is the most politically engaged. Cixin Liu does nothing to dissuade me of that point of view. One last comment before you finally get around to tell stories ... The author began his professional life as a computer programmer in a power plant. We can therefore assume that in reality he knows him science of him. The selection includes ten stories, all in length from 40 to 50 pages. So a little more than a cafe, but surely benefiting from the ability to read a couple at a time. Throughout the entire it is constantly Liu - even where we take a view of the first person (or the first car), there is a differentiation limited by the vehicle. This could make a formulaic approach - and be honest, I think there is a slightly drawn up feeling for some of the stories, which could derive from the disparate linguistic forms that do not actually carry out the translation or could be there in the original deliberately or in other way. However, it's not enough to ruin reading. The piece of the title The wandering land imagines a distant future in which the death of the sun is an imminent expectation. He would become a massive red giant and burning, swelling until its diameter comprised Earth's orbit. This knowledge had been current of 380 previous years, and the timeline projected for the flash was four hundred years old. A lot of work was Donea | The goal is to brake the orbit of the earth, and therefore using huge energy generators send out in the galaxy as a real 'spaceship earth', sling-shotting around planets to gain momentum on its way to a new home, a new start around which it can settle in a new one Of course, not everyone believes what they are told | Mountains as he can get only one to put the most bizarre form of imaginable mountain in the way. When the aliens arrive on earth earth Do it in a massive ship that her gravitational shot draws a huge stationary wave out of the ocean. It is difficult to read this do not remember the cuts of Hukosai wood. What follows is really a speech on the nature of reality and perception: as our mountaineer tries to understand the history and alien philosophy. For me it is where the charm resides in this. The moral at the end of history is aimed at a small tanture for my Western sensitivity. It could be more powerful in China. Normally I try to avoid going story to history is aimed at a small tanture for my Western sensitivity. It could be more powerful in China. Normally I try to avoid going story to history is aimed at a small tanture for my Western sensitivity. It could be more powerful in China. different, and I don't want to sell it short. So, let's go to snippet ... China's sun let me wonder if something like the English son / sun's homophone exists in this semi-satirical story will not exist in its form Original. This is the history of Shui Wah's life as told through her self-improvement program: her very modern series of life goals, who have to do with a world that we can definitely recognize, but then take him to Melissimi Start rotating an ancient Stephen Hawking perfume through the high-tech world cleaning world. A For the benefit of humanity takes us to a particularly Chinese version of what elsewhere could be dubbed hit men in space. It seems we are not to evolve beyond the practice of the contract that kills, even if we find many more inventive ways to justify it. Or indeed to take it out while we find many more inventive ways to justify it. obscurity the Micro ERA offers a possible hope for humanity through a combination of genetic evolution - not the things that feed us, but our species. When the disaster hits the planet as we all know that it will do it, trust me, when you are halfway through the history of Liu of the future you will be converted - then our best hope is to survive with much less than we are used to. This will be possible if we are much smaller than we are now. It is a classic of the SF fee that the alien invasion force is so small compared to humanity that we don't even have the reduced Dell 'Arrival. I can't remember who wrote the original version of that tribute even if I remember that in the version of Douglas Adams the invaders are swept away by a dog for dogs. Liu runs on his head and imagines the human sizes That return to earth after eras and finding their miniaturized species. Do you do at the bottom of the garden? Devourer will dissolve. The weakest of the offer for my money. Say it say, is another group of aliens int Institutions to take what is worth having from the planet and move forward. Much more fun is to take care of God. I loved this. Once again, I think you're probably not so fun in the translated version as it is in the original, and in particular as a Chinese bed. Thus, so there are so many echoes of Adams and Pratchett here that if a laugh-softened is not delivered, I challenge you to cross it without at least a permanent smile. The basic premise is that God (or of) has (having) returned to the ground - creation. And good, since we did, essentially, create you ... could you see your way to take care of us for a while? Even when I write this, I'm also perceiving a touch of Monty Python. I'm not saying more. It is brilliant and for me to me with the piece of the title for the strongest heap. With his eyes is a lament A ¢ â, ¬ "for nature, for love not paid ... and leads directly to Cannonball. Both are focused on attempts to travel to or through the center of the earth, bringing to today Jules Verne Bang. So I know what the guardian auditor meant, when they talked about great style.
